linux-cli

Linux Commands

Check Present Working Directory

`pwd` command tells you the Present Working Directory

```
1   $pwd
2   /home/runner/linux-cli
```

Create a new directory

`mkdir` command makes a new directory

```
$mkdir test
```

> ⓘ A new directory is created with the name 'test'.

Change to a directory

cd command changes directory.

```
$cd test
```

> ℹ️ You changed to the directory named 'test'. Check with the `pwd` command.

```
1  $pwd
2  /home/runner/linux-cli/test
```
